§01 // EXECUTIVE SUMMARY

Operational certainty for East African enterprise.

Acacia Labs builds AI-native operational infrastructure for East African businesses. We replace fragmented workflows — scattered across mobile money networks, WhatsApp chains, and manual spreadsheets — with unified, automated enterprise systems built for real regional conditions.

PRODUCT 01

E-Manager

- Financial ledger
- Workflow automation
- Carrier reconciliation

PRODUCT 02

syncAI

- Real-time AI sync
- Event routing
- Conflict resolution

§02 // PROBLEM STATEMENT

Extreme execution fragmentation.

African commerce suffers from transactions scattered across M-Pesa, Airtel Money, Tigopesa, WhatsApp chains, and verbal handoffs. Without unified coordination, enterprise scale becomes a liability — every expansion multiplies complexity, not efficiency.

QUANTIFIED IMPACT // PER MEDIUM ENTERPRISE, PER MONTH

PROBLEM	ESTIMATED LOSS
Untracked cash-flow leakage	8–12% of monthly revenue
Manual reconciliation overhead	60–120 operator-hours/month
Communication handoff failure rate	22% of field operations
Reporting latency vs real-time	5–7 business days

WHY EXISTING SOLUTIONS FAIL

Salesforce / SAP — Western enterprise design; no M-Pesa depth, fails on bandwidth const...

Local ERP systems — No AI layer; no real-time carrier integrations

WhatsApp + Sheets — Non-auditable, unscalable, zero automation

§03 // MARKET OPPORTUNITY

\$14.2B total addressable market.

WHY NOW

- 78% Mobile money penetration in East Africa (2025)
- +31% YoY Smartphone adoption growth in Tanzania
- 3 nations Regulatory push for digital financial reporting: TZ, KE, UG
- Zero Dominant regional player in AI-native operational software

§04 // USER PERSONAS

A

The Enterprise Opera

Ops Manager, mid-size TZ distribut

PAIN

Reconciles M-Pesa receipts manually e

Reconciliation: 8 hrs → 20 min

B

The Growth CEO

Founder scaling from 3 cities to 7

PAIN

Cannot trust numbers from regional ma

GOAL

Single dashboard across all operation

WIN

Reporting: 2 days → real-time

Reporting: 2 days → real-time

C

The Field Coordinato

Manages 30+ delivery agents, Dar e

PAIN

Agents report via WhatsApp; updates u

GOAL

Route-by-route visibility + automated

WIN

Failed delivery rate: ~40%

Failed delivery rate: ~40%

§05 // PRODUCT VISION & OKRS

VISION STATEMENT

Every East African business operates with Fortune 500 infrastructure precision — built for their actual conditions.

12-MONTH OKRs

OBJECTIVE	KEY RESULTS
O1: E-Manager Product-Market Fit	KR1: 50 enterprise customers · KR2: NPS ≥ 45 · KR3: Churn < 2%
O2: syncAI Operational Backbone	KR1: 10K synced ops/day · KR2: 99.9% uptime · KR3: 5 integrations
O3: East African Brand Authority	KR1: 3 media features · KR2: 500+ subscribers · KR3: 2 partnerships

§06 // E-MANAGER — FEATURE REQUIREMENTS

Unified financial ledger, workflow automation, and multi-carrier payment reconciliation.

P0 — MUST SHIP (CORE PRODUCT)

FEATURE	USER STORY	SUCCESS METRIC
Multi-carrier ledger	View M-Pesa, Airtel Money, Tigopesa in one ledger	<5 min reconciliation
Workflow builder	Create automated approval chains without code	First workflow in 30 min
Real-time dashboard	See revenue, workflows, team status live	Load <2s on 3G
Financial reports	Export audit-ready P&L and cash flow reports	PDF/Excel in <10 sec
Role-based access	Limit what each team member sees and edits	RBAC setup ≤5 min
Offline resilience	Data entered offline syncs on reconnect	Zero data loss

P1 — NEXT QUARTER

FEATURE	NOTES
Mobile PWA	Field agents submit from feature phones — no native app needed
SMS notifications	Critical for low-smartphone environments
Carrier API webhooks	M-Pesa Daraja auto-ingest — requires Safaricom partnership
Custom report builder	Non-technical drag-and-drop interface

§07 // SYNCAI – FEATURE REQUIREMENTS

Real-time AI synchronization — the nervous system of Acacia's operational infrastructure.

P0 – CORE CAPABILITIES

Capability	Description	Target
Event stream	Unified event bus for all operational data	≥ 88,000 ops/sec
AI routing	Auto-route exceptions, alerts, and approvals to the right person	<500ms decision latency
Conflict resolution	AI resolves concurrent record updates correctly	99.8% merge accuracy
Audit trail	Every state change: actor, timestamp, reason	Full immutable log

SYNC AI SUCCESS METRICS

≤ 8ms SYSTEM LATENCY	500K/day SYNCED OPS TARGET	≥ 99.5% AI ROUTING ACCURACY	99.99% UPTIME SLA
-------------------------	-------------------------------	--------------------------------	----------------------

§08 // TECHNICAL ARCHITECTURE

DESIGN CONSTRAINTS – NON-NEGOTIABLE

Low-bandwidth first	All features work on 2G/3G. No feature requires >100KB mobile load.
Offline-capable	Local-first architecture with eventual consistency sync.
Multi-carrier	M-Pesa Daraja v2, Airtel Money API, Tigopesa — all required.
Data sovereignty	All customer data stored in-region (Tanzania/Kenya data centers).
Swahili-ready	Full Swahili localization support without layout breakage.

SCALABILITY BENCHMARKS

Stage	Users	Ops/sec	Architecture Requirement
Seed (now)	<500	88K	Monolith + managed cloud
Series A	5,000	2M	Microservices, CDN edge
Series B	50,000	20M	Multi-region, event sourcing

\$09 // GO-TO-MARKET STRATEGY

HOW SCALABLE COMPANIES DO IT – AND HOW ACACIA ADAPTS

COMPANY	GTM MOTION	ACACIA ADAPTATION
Stripe	Developer evangel → one API → expand full stack	Ops director trial → E-Manager → expand to syncAI
Linear	Product-led → viral in eng teams → seat expansion	Ops manager proof → internal advocacy → enterprise roll-out
Shopify	Free trial → merchant success → network effects	30-day trial → referral + word of mouth (dominant in TZ)

ACACIA GTM – THREE PHASES

PHASE 01 · LAND	PHASE 02 · EXPAND	PHASE 03 · PLATFORM
Now → Q3 2026	Q4 2026 → Q2 2027	2028+
- Target: TZ distributors, 20–100 em - Channel: Direct sales + referral - Offer: Free 30-day E-Manager trial - Lever: Live dashboard in first mee	- Upsell syncAI to E-Manager custome - Expand to Kenya (Nairobi mid-marke - M-Pesa Daraja v2 + NMB/CRDB integr - First regional logistics partnersh	- Open syncAI SDK for developers - Launch integration marketplace - Expand to Uganda, Rwanda - Platform network effects

PRICING MODEL – SAAS, PER SEAT

TIER	PRICE/MONTH	USERS	INCLUDES
Starter	\$49	Up to 5	E-Manager core features
Growth	\$199	Up to 25	E-Manager + syncAI
Enterprise	Custom	Unlimited	All products + dedicated support + custom integrations

§10 // MILESTONES & TIMELINE

§11 // COMPETITIVE LANDSCAPE

COMPETITOR	STRENGTH	WEAKNESS	ACACIA ADVANTAGE
SAP / Oracle	Global brand, enterprise ...	Cost \$50K+/yr; no M-Pesa	10x cheaper, built for local conditions
QuickBooks Africa	Accounting familiarity	No workflow; no carrier APIs	Full operational layer, not just accounting
Odoo	Open source, modular	Heavy customization; no AI layer	Out-of-box African commerce stack
Local ERP startups	Regional presence	No AI, low reliability, poor UX	AI-native from day one, enterprise uptime
WhatsApp + Sheets	Zero cost, familiarity	Non-auditable, unscalable	Migration path + import tools

§12 // RISK ANALYSIS & MITIGATIONS

RISK	LIKELIHOOD	IMPACT	MITIGATION
Carrier API changes (M-Pesa)	Medium	High	Abstract carrier layer; direct Safaricom relationship
Customer churn from complexity	Medium	High	Free onboarding + 90-day dedicated success manager
Bandwidth limits adoption	High	Medium	Offline-first architecture (PO — non-negotiable)
Regulatory changes	Low	High	In-region storage; legal counsel on TZ/KE data acts
Fundraising delay	Medium	Medium	Revenue-first model; profitable at 50 customers
Competitor market entry	Low	Medium	Context advantage; move fast on carrier integrations

§13 // SCALABLE COMPANY BENCHMARKING

DIMENSION	STRIPE	LINEAR	SHOPIFY	ACACIA LABS
Core thesis	API-first payments	Speed-first PM	Merchant commerce	Ops-first African infra
User focus	Developers	Eng teams	SMB merchants	East African operators
Deployment	Global cloud	SaaS	Multi-channel	Regional, low-bandwidth
Differentiation	Simplicity + reliabi...	Opinionated speed	Commerce stack	Context-native design
PRD style	Problem→API→Metrics	Story→Sprint	Feature→Impact	Infra→System→Adoption

ACACIA MOAT — WHAT COMPETITORS CANNOT REPLICATE

- Context is the moat — M-Pesa depth, Swahili UX, offline resilience cannot be bolt-on features.
- Infrastructure, not features — We sell operational certainty, not software tools.
- Regional first, global capable — Built for Tanzania constraints; that scale wins everywhere else.
